Abstract: The well-known taxonomist of hypogeous fungi Fedor Bucholtz (29 Oct 1872 – 30 April 1924) was born in Warsaw; after studies in Moscow University (1891–1895) he was a professor of botany in Riga Polytechnic Institute (1897–1919) and Tartu University. The rich herbarium of fungi collected by him was partly destroyed during World War I or lost when evacuated to Russia; it partly found a new home in the Farlow Herbarium of the Harvard University in the USA. In the Herbarium EAA of the Estonian University of Life Sciences (Tartu, Estonia) there are 2419 specimens collected by him. In 2010, among old unordered collections of microfungi about 650 specimens, collected possibly by Bucholtz were found in the herbarium TAAM in Tartu. There are 457 specimens (383 species) in tiny envelopes of similar size and paper. This is possibly Bucholtz's collection of reference specimens (assembled from larger samples of identified species) he kept with him during his enforced travels. A list of this collection is appended to this paper.

Kokkuvõte: Fedor (Theodor) Bucholtzi mükoloogilised kogud

Maa-aluste viljakehadega seente hästituntud süstemaatik Fedor (Theodor) Bucholtz (29. okt. 1872 – 30. apr. 1924) sündis Varssavis ja õppis Moskva ülikoolis (1891–1895). Ta oli õppejõud, hiljem professor Riia Polütehnilises Instituudis (1897–1919) ning Tartus (1919–1924), kus sai 1920 Eesti kodakonduse. Tema korjatud rikkalik seente kollektsoon on osalt I Maailmasõjas ja seoses kogude Riiaast 1915. a. Venemaale evakueerimisega hävinud, osa sattus hiljem USA Harvardi Ülikooli Farlow' Herbaariumi; Eesti Maaülikooli kollektsooni EAA on 2419 ja TAAM – 8 eksemplari. 2010. aastal leiti herbaariumis TAAM vanade korraastamata materjalide seast veel ligi 650 ilmselt Bucholtzi kogutud seent. Viimastest pakub erilist huvi 383 mikroseente liigi 457 isendist koosnev sarnase vormistusega (vt. 1. foto) valim, mis võis olla Bucholtzi leiu- ja koguja-andmeteta võrdlus- ehk nn. käsikogu. See võis olla Bucholtziga kõikjal kaasas – sõjaoludest sunnitud evakueerumisel, pagemistel ja elukoha vahetustel. Nende seente nimestik on toodud artikli teises osas.

FEDOR BUCHOLTZ

Fedor Bucholtz (29 Oct 1872 – 30 April 1924) was a well-known taxonomist of hypogeous fungi, professor of botany in Riga, Latvia and Tartu, Estonia. He was born in Warsaw but after death of his father in 1876 we know he was living in Riga, Latvia where he graduated from a gymnasium in 1891. After studies in Moscow University (1891–1895) he was left there to be prepared for professorship; in 1897–1919 he was an Associate Professor, Adjunct Professor and Professor of botany and plant physiology in Riga Polytechnic Institute (which was 1915–1918 evacuated to Moscow). From 1910–1913 he was the Vice-Director of the Institute in Riga then in 1912 the Dean of the Agricultural Faculty, and in 1917 he was the Secretary of the Institute's Council. Among his students were several later well-known Russian mycologists, including A.S. Bondarzew, in addition he trained a large number of Estonian agronomists.

To support his studies in taxonomy and distribution of hypogeous fungi and plant parasites, Bucholtz collected fungi for the herbarium and for distribution in an exsiccatae. This activity took him to Central Russia, Latvia, Saaremaa Is. (Estonia), Caucasus, Georgia, Austria, Italy, Germany and other places.

In the second year of the World War I, when German army was approaching to Riga, the Riga Polytechnic Institute was evacuated. On 20 July 1915 all faculty and staff moved to Tartu. About 1500 items including equipment, collections and other materials was evacuated to Nizhnyi Novgorod (East of Moscow) and in November some 300 items were transferred from there to Moscow. The buildings of Pētermuīža, the experimental farm near Riga, were burnt down by the Russian Army two hours after the evacuation order was issued. The laboratories, libraries and archives along with all records of research work done went up in flames. Nothing

could be rescued (Järvesoo, 1980: 250). Obviously, mycological collections not evacuated in the last hours were destroyed in the fire.

Mycological collections remained at Nizhnyi Novgorod. In the minutes of the Council of the Institute of 11 August 1915 in Tartu it was mentioned, that Prof. F. Bucholtz was living in Moscow (*Report...*, 1916). In October 1915, activities of the Institute were resumed in several places in Moscow. The agricultural chairs were moved to the Moscow Agricultural Institute in Petrovsko-Razumovsk near Moscow (now it is a part of Moscow), then to Ivanovo-Voznesensk (renamed Ivanovo later) about 300 km northeast of Moscow (Komarnitski, 1947: 322). By 20 April 1918 the Educational Committee of the Institute had decided to stop teaching in Moscow on 28 April and to return the Institute to Riga (Hoffmann, 1918: 15).

It was a politically and militarily confusing time: there was the bolshevistic regime in Moscow, but Riga the German army had occupied since 3 September, 1917. Russia and Germany made peace, the Brest peace treaty, on 3 March 1918. The Faculty and staff of the Riga Polytechnic Institute was partly re-evacuated to Riga in summer 1918. Bucholtz described in his letter to Tartu University, dated 18 Oct 1920 that he was permitted to take with him to Riga from Ivanovo-Voznesensk only a small part of his personal belongings (clothes, underwear).

During the German occupation in 1918, local German scientists tried to reorganize the Polytechnic Institute in to a *Baltic* Institute, but this Institute existed only a few months, not later than 11 November, when Germany was defeated.

Latvia was declared an independent republic in November, 1918, but by January, 1919 Riga was conquered by the Russian Red Army. On 10 Feb, 1919 it was resolved by the governmental Permanent Comission on Latvian Affairs in Moscow, that all property of the Riga Polytechnic Institute, as well as personal property of its professors must be returned to Riga as soon as possible. However, everything changed rapidly, and soon all the property was sent not to Riga, but rather to the newly established Ivanovo-Voznesensk Polytechnic Institute, not far from Moscow.

At the same time the situation was changing in Riga as well. In May, 1919, Riga was taken by the German *Landeswehr* army. In June the Estonian army helped to free the Latvian

Republic from foreign military forces. In 1919, the Polytechnic Institute was incorporated into the newly created University of Latvia, opened on 28 September 1919 (Järvesoo, 1980: 241; Bucholtz, letter to the administration of Tartu University, 22 Feb 1920).

Bucholtz returned to Riga in 1918 and continued to read lectures in the Institute (Lepik, 1925: 289). Earlier in 1916/1917 when still in Moscow, he had sent his *Curriculum vitae* to the Tartu University (Bucholtz, 1919). In 1919 he was invited to Tartu University to be a professor in botany, and was appointed to this post by a decree of the Minister of Education dated 20 August, 1919. At this time both Latvia and Estonia were fighting a War of Independence with Russia, so Bucholtz with his family arrived to the war-time Estonia later, in December 9, 1919. He has lost his library, his mycological collections and everything else, but was happy to be welcomed in to a very old university (founded 1632) to participate in its renovation. He was a member of the Tartu Naturalists' Society since 1905 and had published many papers in the botanical periodicals of this university. He arrived with all his family – his wife Claudia and sons Alexander (*23 Oct 1900), Vladimir (*30 March 1899), Feodor (*8 January 1905), Boris (*24 September 1903) and Claudius (*13 March 1902). Three of them were soon students of the Tartu University attending without tution fees. He lived at the Botanical Garden. The address was indicated as Kroonuaia St. 28/40 (EAA.2100.1.1248), but this is apparently an error. The correct address is obviously the one of the Botanical Garden – Lai St. 38/40.

He organized the teaching and scientific research in the Institute of Botany; restored activities at the Tartu Botanical Garden, where a new, Estonian division was created; founded the Phytopathological Cabinet of the University in 1922; and organized courses for agronomists on protection of potatoes against fungal diseases. By 20 November, 1919 he already was elected the Vice-President of the Tartu Naturalists' Society; was the first chairman of the Society's plant conservation section, newly established in 1920; and editor of the Society's Transactions. He was the primary promoter of nature conservation in the Estonian Republic, and together with other professors tried to find a virgin forest suitable for the first National Park in Estonia. He published several popular-scientific articles in Estonian

journals and newspapers. To manage with all this, he began to learn Estonian.

Tartu University administration supported his application to get Estonian citizenship on 21 May 1920 and it was awarded to him and his family members in 1920. In Estonian archives (but not in his new passport, issued 5 Nov 1920) his forname has written *Theodor* but, he did not change the spelling of his name in his publications.

At the end of September 1922 Bucholtz became seriously ill and died from brain sclerosis in age of 51 in Tartu on 30 Apr 1924 (Estonian History Archives EAA.1979.1.420; 1917–1925). He was buried 5 May 1924 in Tartu St. John's Old Cemetery, soon after a gravestone was set with a few simple words on it: PROF. FEDOR BUCHOLTZ. STUDENTS. 1925 (Fig. 1). His son Alexander went to USA in 1922 or 1923, four other sons and his widow remained (possibly) in Estonia. On 1939 his widow Claudia with son Claudio were living in Kohtla (Kohtla Commune, N. Estonia), Feodor in Jõhvi (N. Estonia), Vladimir in Tartu, Boris had possibly already left Estonia (State Gazette 1940, Supplement 14: 31; 36: 1209). They all resettled from Estonia to Germany in 1939 or 1940.

Bucholtz's biography given above is based on articles by Kaho, 1924; Lepik, 1925, 1925-a, 1934; Komarnitski, 1947; Kongo, 2003; Vilberg, 1922, and personal folders in the Estonian History Archives. Interesting photos of F. Bucholtz and his family may be seen in his descendants' homepage www.bucholtz.de

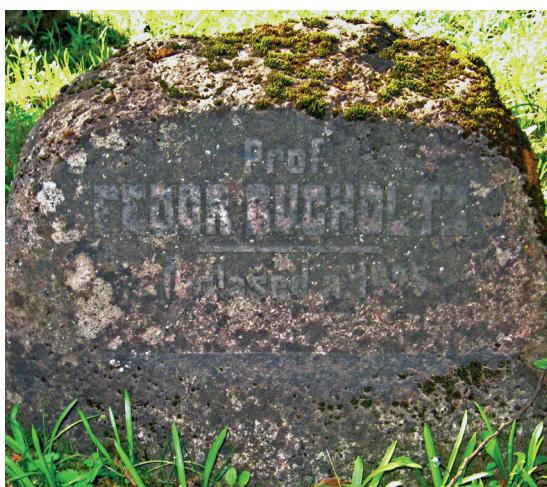

Fig. 1. Fedor Bucholtz's gravestone.

WHERE ARE THE BUCHOLTZ'S MYCOLOGICAL COLLECTIONS?

One, possibly smaller part of his collections was destroyed 20 July 1915 in Pētermuiža near Riga. According to *Report...* (1916), the main mycological collections packed in boxes were evacuated in 1915 and remained in Nizhnyi Novgorod; according to Komarnitski (1947), Bucholtz lost almost all his extensive collections by 1915, when the Institute was evacuated from Riga. The same was repeated recently (Anonymus, 2000), possibly by a Russian author as follows, "In order to save his invaluable collections and herbarium, F.V. Buchholts [sic!] sent them to Moscow as heavy luggage. But in the confusion of wartime these materials were lost." The date, 1915, is obviously erroneous; the trouble with his collections and other property was really in 1918 and later. Lloyd (1923: 1169) wrote: "In the recent cataclysm that overtook Russia he lost everything, his property, library, collection, and was fortunate to escape with his life". However, Lloyd got the data for his short article from Prof. O. Mattiolo (Italy), who was Bucholtz' supervisor in 1899; possibly Mattiolo was in correspondence with Bucholtz in 1922 or earlier.

War of Independence ended with the Estonian-Russian peace treaty in 2 February 1920. Already by 22 February professor Bucholtz sent a letter to the administration of the university asking to help him to get his personal library, manuscripts, herbarium collections and other items, packed in boxes, kept in the newly founded Ivanovo-Voznesensk Polytechnic Institute. He repeated his requests twice after he got his Estonian citizenship. Tartu University applied to the governmental Commission on Returning the Evacuated from Estonia Properties and to its delegation in Moscow.

The correspondence includes valuable information on the collections. In appendices to Bucholtz's letters, it has been described as follows:

Collections. 1. Herbarium of (mainly Baltic) fungi, about 2,200 Nos. (more than 20,000 specimens) in 20–22 green folders, envelopes with a title *Fungi rossici exs. coll. F. Bucholtz*. 2. *Fungi rossici exsiccati* by F. Bucholtz and Bondarzew, fasc. 3, 4, 13, 14. This edition in many sets in green folders is all my personal work and is for distributing to the subscribers. 3. Dried plants (parasitic fungi) in many binded

up folders. This is the material to be used for the exsiccata (p. 2). ... 5. *Russian fungi* edited by Nevodovsky, in 3 or 4 folders. 6. Collection of photos of plant diseases. 7. Collection of portraits of botanists and others. (ERA.1025.1.119).

The process of returning Bucholtz's property was dragging out as seen from the correspondence between the Commission and Russian National Commissariat of Foreign Affairs (ERA.1025.1.119). In a letter to Erik Lundstroem (Sweden), Bucholtz wrote 10 Feb 1922: "... my collections have not yet been returned ... I hope my Endogone-collection will anyway returned from Moscow" (Archive of the Herbarium TU, Bh 10, 1920–1922). Vilberg (1922: 361) mentioned later in 1922, "Most of his personal library, his valuable fungal collections and cultures remained in Russia".

Bucholtz' collections and library were returned to his inheritors later; we do not know with certainty until additional studies in archives are conducted, but probably this was sometime after 1924, after death of Bucholtz.

Where are the Bucholtz' collections now? In Riga or in other Latvian herbaria, there are no specimens collected by Bucholtz (Edgars Vimba *in litt.*, 15 March 2010). We have not found no data on his collections in Moscow or St. Petersburg herbaria (Parmasto, 1985; Index Herbariorum, <http://sweetgum.nybg.org/ih/>).

After Bucholtz's death in April 30, 1924, his family (widow and five children, among them three students of the Tartu University) fell into serious financial difficulties. One set of all 8 fascicles of the *Fungi rossici exsiccata* was sold to the Tartu University Botanical Garden on 3 Jan 1925 for 10,000 Estonian mark (EAA.2100.12.144, 1 80p). About 5,200 specimens were obtained by the Farlow Herbarium of the Harvard University, USA (Pfister, 2010). 5,000 specimens of his personal herbarium, and specimens prepared in 1915–1918 for the *Exsiccati* fasc. IV and XIV were passed as a generous gift to Tartu University by Claudia Bucholtz in 1926–1930. However, in 1934, the bulk of the specimens were not yet put into order (Lepik, 1934: 5, 8).

In the first list of fungi, offered in exchange by the Phytopathological Institute of the Tartu University (Lepik, 1932) only three specimens collected by Bucholtz were listed, but 4 sets of Bucholtz-Bondarzew's *Fungi rossici exsiccata* fasc. III, 26 sets of fasc. IV and 16 sets of fasc.

XIV were included. In the second list, published 11 years later (Lepik, 1943), no exsiccata were offered for exchange, but 29 specimens (altogether 420 duplicates) collected by Bucholtz were listed. It is possibly that fascicles of the *exsiccata* were all used for the exchange of the herbarium.

In 1943 all collections of the Phytopathological Institute, including the exchange specimens were kept in Raadi, on the outskirts of Tartu, in the Phytopathological Experimental Station. The main herbarium of the Station was evacuated in summer, 1944, possibly to Konguta, a village in Tartu County and survived the destruction of the war. The exchange herbarium was possibly destroyed together with all buildings of the agricultural experimental station of the University in the Raadi Manor in battles of 5 September, 1944 (Viiralt, 1991: 168). There are no data in the Estonian archives on the evacuation or the destruction of Station's property in 1944 (EAA.5311.1).

In the fungal herbaria in Tartu, in 2009/2010 there were 2419 specimens of microfungi (about 500 species) collected by F. Bucholtz in the herbarium EAA of the Estonian University of Life Sciences, 8 in TAAM (of the same university). These specimens were collected by Bucholtz between 1892 to 1924; only 10 specimens in years 1919–1924 when he was in Estonia. Of the 2419 specimens, 2065 were collected before 1915, i.e. before the evacuation of the Riga Institute and himself to Moscow region. No hypogeous fungi are in the collections in Tartu.

FUNGI ROSSICI EXSICCATI

Bucholtz distributed fascicles I (Ser. A, nos. 1–50) and XI (Ser. B, nos. 501–550) of his *Fungi rossici exsiccata* from Riga, in 1915. A list of fungi included and host plants was published in the *Rapports et travaux* of the Institute (Bucholtz, 1915). Serie A with more or less common species was released in 100 copies, Serie B (rare species) was issued in 50 copies. Next two fascicles (A II, nos. 51–100 and B XII, nos. 551–600) were prepared by him in the Imperial Moscow Botanical Garden and issued in Moscow in 1916 (Bucholtz, 1916). Fasc. A III (nos. 101–150) and B XIII (nos. 601–650) of the exsiccata were compiled by Bucholtz and Bondarzew together and released in 1916 (Bucholtz, 1917: 57).

Fascicle A IV (nos. 151–200), possibly also fasc. A XIV (nos. 651–700) were prepared (or also released?) in January 1918 (as written by hand on the title label on a specimens map in TAAM). Unlike the former fascicles, the labels in fascicle IV (and XIV?) are handwritten and then mimeographed; the violet ink used is now often very much faded. No schedae were published with these fascicles but were printed in condensed form in 1932 (Lepik, 1932: 93–96). Numbers 201–500 were not used in the fascicles edited until 1918 or later. Lepik (1932: 91) indicated, that specimens for these fascicles were prepared by Bucholtz in 1915–1918 in Ivanovo-Wosnessensk (near Moscow) and passed by Claudia Bucholtz to the Tartu University as a gift in 1931. The sets of the exsiccatae are possibly present in several herbaria of the world (including BPI, CUP, FH, S – cf. Pfister, 1985: 51) but none are in Riga or in the herbarium of the former Phytopathological Institute of the Tartu University (EAA). The only complect survived (fasc. XIV lacking) in Estonia is in the herbarium TAAM (deposited from the Department of Botany of the Tartu University).

A BUCHOLTZ'S REFERENCE SPECIMENS COLLECTION

In January, 2010 when checking last unsorted collections of micromycetes in the Herbarium TAAM (former TAA) in Tartu, Estonia, the curator Ilmi Parmasto found a folder with 296 tiny packets of microfungi. On every small envelope or packet, Latin names of the fungus and host plants are indicated in dark, almost blackish ink. No collector or identifier names were indicated, in addition in most cases no data on localities were mentioned. All envelopes have in upper part a number, from 294 to 517, written with blue pencil (Fig. 2).

After some months, another collection of similarly numbered specimens with blue pencil envelopes was found among packagess of specimens, collected by our colleague Peeter Pöldmaa (1929–1990) for the not yet compiled and distributed fascicles (IV and onward) of the exsiccatae "Mycotheca Estonica". This second enigmatic collection is a mixed set of envelopes with fungi of different origin:

1–7, 9–89 – uniformly formatted exchange specimens of Russian fungi, collected by Schirayevsky.

Fig. 2. Some envelopes with reference specimens. Upper right: *Puccinia coronifera*. 'Blue number' = 245, old no. – 255, in parentheses *Fungi rossici exsiccatai III* number: 119. Next envelope: *Phoma Anethi*, no. 282, old number – 198, *exsiccatai IV* no.: 188.

90–104 – *Fungi Rossici*, collected by G.S. Nevodovsky.

105–132, 138–148, 150–179, 181–224, 239–252, 254–262, 264, 266–276, 279–281, 417–418, 431, 451–452, 467, 675–677, 679, 682–683, 723 – mainly specimens in unlabelled envelopes, inside a small sheet with fungal and host names. Some specimens were collected by Johann Andreas Bäumler, František Bubák, Karl von Keissler, Franz Petrak and Zoltán von Szabó. On some envelopes collecting locations are mentioned. These localities include: Carlberg, Gebirgspark, Helvetia, Stuttgart, Tirol. In some envelopes up to 9 different species of fungi from different hosts are found together; the names and blue numbers are written on the envelope.

225–230 – species of *Uromyces* collected by Leonid Aref'yev.

245, 247, 250, 263, 282–293, 467, 524–545, 550, 552–581, 583–623, 632–638, 674–677, 679–861, 684–758, 835–864 – small envelopes, similar to the first listed described above.

There are three different types of specimens that are in the set of fungi found in the herbarium TAAM in 2010:

1. Duplicates of fungi collected for exchange by Aref'yev, Schirayevsky, Bäumler a.o.

2. Unordered collections, sometimes several species in one envelope, not yet labelled, collected from different, mainly unnamed localities. Ten specimens were collected (possibly by other mycologists) in Brazil, Hungary, Mexico, Romania, Slovakia, South-West Africa or Teneriffe (Canary Is.). This collection will be databased and included in the European section of the general herbarium of TAAM during 2010.

3. 457 specimens (some erroneously with the same number) which make up a selection of 383 species in more or less uniform tiny envelopes, identified, but all without data on collectors and identifiers, mostly also with no data on localities. It seems to be a collection of reference specimens (hand sample of identified species) to be used in identification of new collections or to check understanding of species concepts of a mycologist. But it is also possible, that this selection is (partly) a set of small parts of specimens, kept by Fedor Bucholtz with him when travelling. He may have kept these fearing that the main collections might be lost or destroyed. Or they may be small examples of specimens previously given away.

On these envelopes month and year of collecting usually are indicated, but in several cases only month (without year) are given. The year is written usually in a shortened way – e.g., 917 instead of 1917. The first specimens were collected in February, 1902; the last ones in 1919 (two collections), one in January, 1920 and one in 1923. A few are numbered (e.g., 198) in parentheses after the fungus name, in many cases in the middle of the envelope there is a number (between 193–263) which was later struck-out. Also on some envelopes a number after the letter N was given. This is the number of the same specimen in his *Fungi rossici exsiccati*. Some few envelopes have abbreviated localities (usually – name of a Russian province, written in Russian).

According to the handwriting, collecting places and data, and type of numbering, most of the collections have been made and / or managed by Fedor Bucholtz. Blue numbers in right upper corner are obviously written at the same time, but possibly by a person other than F. Bucholtz after January, 1920 or after 1923. (Some few specimens were collected then.) Several paper envelopes were made from unused forms from the North-Western Russian Railway charge printed in 1911 or later, one from an unused forest accounting form, printed in Estonia in 1919 or later.

What are the numbers written by blue pencil on all specimen envelopes? Was there a numbered list of localities and other data? Were they numbered in connection with passing the specimens as a gift to the Tartu University, or was there a hope to sell the specimens similar to the ones sent to the Farlow Herbarium? There is neither any thing about this situation in the Estonian archives, nor in the small collection of Bucholtz's papers in Tartu University Botany Department. Nevertheless, the reference collection is kept separately in the herbarium TAAM, and the list of its specimens is given below as an appendix to this paper.

ACKNOWLEDGMENTS

I am very thankful to the Principal Specialist of the Estonian History Archive Tatjana Šor, archivist of the National Archives of Estonia Liina Maadla, Latvian mycologist Edgars Vimba, the late IT specialist of the Tartu University Museum of Natural History Aavo Kuslapuu, curator of the Estonian University of Life Sciences herbarium TAAM Ilmi Parmasto for information they have given me and for their help, and to Dr. Donald H. Pfister (Farlow Herbarium, USA) for revising the English of the manuscript and for helpful remarks.

APPENDIX

List of specimens in the Bucholtz's reference collection of fungi

After fungus and its host names, locality and collecting date (when indicated) are given. In parentheses other numbers written on the envelope are indicated: strikethrough – number in black, struck out later; in bold – number of the same species and host in an earlier edited fascicle of the *Fungi rossici exsiccati*. After the number of the specimen in the herbarium TAAM, the number (245–864) written by blue pencil on every envelope is indicated.

- Acrospermum compressum* Tode – *Apiaceae* sp. Mar 1912. TAAM 202481. – 473.
- A. compressum* Tode – *Urtica dioica*. TAAM 202233. – 472.
- Acrostalagmus cinnabarinus* Corda – *Quercus* sp. TAAM 202374. – 389.
- A. cinnabarinus* Corda – *Solanum tuberosum*. Oct 1911. TAAM 202375. – 389-a.
- Aglaospora anomia* (Schwein.) Lambotte – *Robinia pseudoacacia*. Apr. 1913. TAAM 202495. – 426.
- Alternaria brassicae* (Berk.) Sacc. – *Brassica* sp. Oct 1911. TAAM 202498. – 406.
- A. tenuis* Nees – *Arrhenatherum elatius*. TAAM 202424. – 405.
- Amphisphaeria aplanata* (Fr.) Ces. & De Not. – *Carpinus* sp. and *Quercus*. Jun 1908. TAAM 202382. – 427.
- Antennaria pinophila* Nees – *Abies pectinata*. 1908. TAAM 202494. – 422.
- Anthostoma alpinum* (Fuckel) Sacc. – *Lonicera xylosteum*. TAAM 202313. – 403.
- A. microsporum* P. Karst. – *Alnus* sp. Mar 1913. TAAM 202312. – 402.
- A. turgidum* (Pers.) Nitschke – *Fagus sylvatica*. Nov 1902. TAAM 202314. – 404.
- Ascochyta orientalis* Bondartsev – *Syringa vulgaris*. (257, **138**). TAAM 202461. – 366.
- Aspergillus candidus* Link. Nov 1911. TAAM 202226. – 395.
- A. niger* Tiegh. – *Nicotiana tabacum*, on fermented leaves. TAAM 202227. – 394.
- Asterosporium hoffmannii* Kunze – Bei St. George... Jul 1908. TAAM 202671. – 263.
- Bactridium flavum* Kunze – *Salix* sp., on rotten trunks. Oct 1915. TAAM 202575. – 719.
- Bertia moriformis* (Tode) De Not. – *Fagus sylvatica*. Jan 1916. TAAM 202383. – 428.
- Bispore effusa* (Corda) Keissl. – *Pinus sylvestris*. TAAM 202363. – 407.
- Botrytis acinorum* Pers. – *Vitis vinifera*. 1910. TAAM 202470. – 430.
- B. cinerea* Pers. – *Helianthus annuus*. Dec 1911. TAAM 202228. – 391-a.
- B. cinerea* var. *sclerotiphila* (Klotzsch.) Sacc. – *Sclerotium durum* *Chaerophyllum* sp. Mar 1911. TAAM 202462. – 392.
- B. parasitica* Schleid. – *Tulipa* sp. 1913. TAAM 202232. – 393.
- Camptoum curvatum* (Kunze & J.C. Schmidt) Link – *Scirpus lacustris*. Mar 1916. TAAM 202472. – 408.
- Cephalosporium acremonium* Corda. – *Pteris vespertilio*nis. TAAM 202360. – 432.
- Cercidospora epipolytropa* Arnold – *Lecanora configurata*. TAAM 202384. – 429.
- Cercospora armoraciae* Sacc. – *Cochlearia* sp. TAAM 202451. – 562.
- C. beticola* Sacc. – *Beta vulgaris*. Aug 1913. TAAM 202453. – 564.
- C. canadensis* A.B. Frank – *Erigeron canadensis*. Russia, Orlov. 15 Aug 1915. TAAM 202485. – 540.
- C. depazeoides* (Desm.) Sacc. – *Sambucus nigra*. Sep 1911. TAAM 202449. – 560.
- C. ferruginea* Fuckel – *Artemisia vulgaris*. Oct 1919. TAAM 202445. – 557.
- C. majanthemi* Fuckel – *Maianthemum bifolium*. (698; N 528, 529 – but these are **not** the nos. in *Exsiccata!*). TAAM 202296. – 343.
- C. mercurialis* Pass. – *Mercurialis annua*. Oct 1909. TAAM 202447. – 558-a.
- C. mercurialis* Pass. – *Mercurialis perennis*. Aug 1918. TAAM 202446. – 558.
- C. microsora* Sacc. – *Tilia cordata*. 12 Sep 1917. (**+93**). TAAM 202297. – 344.
- C. myrti* Erikss. – May 1913. TAAM 202452. – 563.
- C. nasturtii* Pass. – *Raphanus raphanistrum*. Oct 1911. TAAM 202450. – 561.
- C. nasturtii* ssp. *barbareae* Sacc. – *Barbarea vulgaris*. Aug 1918. TAAM 202448. – 559.
- C. opuli* Höhn. – *Viburnum opulus*. Russia, Orlov Prov., 27 Aug 1916. TAAM 202231. – 539.
- C. rosicola* Pass. – *Rosa* sp. 4 Aug 1916. (**+94**). TAAM 202298. – *Ceriospora dubyi* Niessl – *Humulus lupulus*, on dry stems. TAAM 202385. – 433.
- Chaetomium murorum* Corda – May 1917. TAAM 202386. – 434.
- Cladosporium epiphyllum* (Pers.) Nees – *Fraxinus excelsior*. Mar 1908. TAAM 202558. – 703.
- C. fasciculatum* Corda – *Juncus effusus*. Oct 1917. TAAM 202557. – 702.
- C. fuligineum* Bonord. – *Russula* sp., on a rotten fruitbody. Sep 1918. – TAAM 202559. – 704.
- C. typharum* Desm. – *Typha angustifolia*. Latvia, 3 Aug 1914. TAAM 202202. – 399.
- Cladotrichum myrmecophilum* (Fr.) Lagerh. – *Picea abies*. TAAM 202420. – 409.
- Coleosporium pulsatillae* (F. Strauss) Fr. – *Pulsatilla patens*. Latvia, near Riga. 12 Aug 1915. TAAM 202259. – 545.
- Coleroa chaetomium* (Kunze) Rabenh. – *Rubus idaeus*. Sep 1916. TAAM 202427. – 424.
- C. potentillae* (Wallr.) G. Winter – *Potentilla anserina*. Oct 1915. TAAM 202428. – 475.
- C. potentillae* Fuck. – *Potentilla anserina*. Oct 1915. TAAM 202500. – 425.
- Colletotrichum gloeosporioides* (Penz.) Penz. & Sacc. – *Hedera helix*. TAAM 202523. – 618.
- C. lindemuthianum* (Sacc. & Magnus) Briosi & Cavara – *Pisum sativum*. TAAM 202524. – 619.
- Coniosporium arundinis* (Corda) Sacc. – *Phragmites communis*. Jan 1911. TAAM 202561. – 706.
- C. phyciae* (Kalchbr.) Sacc. – *Xanthoria parietina*. 1916. TAAM 202560. – 705.
- Coniothecium complanatum* (Nees) Sacc. – *Salix* sp. TAAM 202563. – 708.
- Coremium glaucum* Link – an Faulend. Brote; Zimmer. Jan 1916. TAAM 202584. – 728.
- Coryneum acerinum* Bäumler – *Acer campestre*. May 1900. TAAM 202525. – 620.
- C. disciforme* Kunze & J.C. Schmidt – *Betula* sp. Mar 1908. TAAM 202252. – 311.
- C. fagineum* Delacr. – *Fagus* sp. Oct 1909. TAAM 202526. – 621.
- C. microstictum* Berk. & Broome – *Carpinus* sp. Feb. 1910. TAAM 202527. – 622.
- C. notariitianum* Sacc. – *Castanea vesca*. Apr. 1917. TAAM 202528. – 623.
- Cryptosphaeria eunomia* (Fr.) Fuckel – *Fraxinus excelsior*. Dec 1912. TAAM 202387. – 435.
- Cryptospora suffusa* (Fr.) Tul. & C. Tul. – *Alnus glutinosa*. Nov 1916. TAAM 202465. – 436.
- Cryptosporella populina* (Fuckel) Sacc. – *Populus pyramidalis*. Feb 1908. TAAM 202484. – 437.
- Cryptosporium euphorbiae* Höhn. – *Euphorbia palustris*. TAAM 202399. – 578.

- C. ferrugineum Bonord. – *Morus alba*. TAAM 202400. – 579.
 C. lunulatum Bäumler – *Sarothamnus scoparius*. Mar 1915. TAAM 202401. – 580.
 C. neesii Corda – *Alnus incana*. Jan 1911. TAAM 202253. – 312.
 C. neesii Corda – *Betula* sp. Nov 1917. TAAM 202403. – 581.
 C. neesii Corda – *Betula* sp. Nov 1917. TAAM 202459. – 309.
Cryptovalsa pruni Fuckel – *Prunus armeniaca*. Mar 1916. TAAM 202307. – 444.
Cucurbitaria berberidis (Pers.) Gray – *Berberis vulgaris*. June 1914. TAAM 202501. – 448.
 C. elongata (Fr.) Grev. – *Robinia pseudoacacia*. 1916. TAAM 202308. – 446.
 C. laburni (Pers.) De Not. – *Cytisus laburnum*. Jun 1914. TAAM 202309. – 447.
 C. symphoricarpi (nom. ined.?) – *Symphoricarpos* sp. Apr 1916. TAAM 202467. – 445.
Cyathus olla (Batsch) Pers. – Russia, Mosqua Prov., Kryukovo, Jul 1915. TAAM 202229. – 586.
 C. striatus (Huds.) Willd. – *Alopecurus pratensis*. Russia, Mosqua Prov., Kryukovo, Jul 1915. TAAM 202261. – 585.
Cylindrium aeruginosum (Link) Lindau – *Quercus* sp., on leaves. TAAM 202456. – 398.
 C. elongatum Bonord. – *Quercus* sp. Nov 1908. TAAM 202455. – 397.
 C. griseum Bonord. – *Quercus* sp. Oct 1909. TAAM 202454. – 396.
Cylindrosporium veratrinum Sacc. & G. Winter – Russia, Orlov. 10 Jul 1916. TAAM 202460. – 541.
Cytospora ambiens (Nitschke) Sacc. – *Quercus* sp. TAAM 202605. – 749.
 C. chrysosperma (Pers.) Fr. – *Populus* sp. Dec 1909. TAAM 202614. – 755.
 C. cincta Sacc. – *Persica vulgaris*. Feb 1908. TAAM 202617. – 758.
 C. clypeata Sacc. – *Rubus* sp. Mar 1916. TAAM 202611. – 752.
 C. curreyi Sacc. – *Pinus strobus*. Nov 1909. TAAM 202612. – 753.
 C. flavovirens Sacc. – *Kerria japonica*. Mar 1908. TAA 202606. – 750.
 C. flavovirens Sacc. – *Rosa canina*. Dec. 1916. TAAM 202608. – 750-b.
 C. flavovirens Sacc. – *Tilia* sp. Apr. 1912. TAAM 202609. – 750-c.
 C. flavovirens Sacc. – *Ulmus effusa*. Apr. 1908. TAAM 202607. – 750-a.
 C. friesii Sacc. – *Abies pectinata*. Oct 1910. TAAM 202640. – 835.
 C. microspora (Corda) Rabenh. – *Sorbus domestica*. Oct 1904. TAAM 202641. – 836.
 C. microstoma Sacc. – *Prunus avium*. Jun 1914. TAAM 202643. – 837-a.
 C. microstoma Sacc. – *Prunus cerasus*. Jun 1914. TAAM 202642. – 837.
 C. nivea (Hoffm.) Sacc. – *Populus nigra*. Jun 1917. TAAM 202644. – 838.
 C. pinastri Fr. – *Abies concolor*. Sep 1913. TAAM 202367. – 577.
 C. pinastri Fr. – *Picea abies*. Mar 1917. TAAM 202439. – 556.
 C. rhodophila Sacc. – Mar 1909. TAAM 202613. – 754.
 C. rosarum Grev. – *Rosa* sp. Mar 1911. TAAM 202610. – 751.
 C. salicis (Corda) Rabenh. – *Salix* sp. Apr. 1916. TAAM 202616. – 757.
 C. syringae Sacc. – *Ligustrum vulgare*. TAAM 202604. – 748.
 C. tamaricis Brunaud – Jun 1912. TAAM 202615. – 756.
Daldinia tuberosa (Scop.) J. Schröt. – *Fagus* sp., on a twig. Oct 1917. TAAM 202305. – 442.
Darluca filum (Biv.) Castagne – *Puccinia maydis*. (544). TAAM 202262. – 333.
Dendryphion curtum Berk. & Broome – *Betonica* sp. Mar 1908. TAAM 202586. – 730.
Diaporthe conjuncta (Nees) Fuckel – *Corylus avellana*. TAAM 202355. – 493.
 D. faginea (Curr.) Sacc. – *Fagus sylvatica*. Dec 1913. TAAM 202356. – 494.
 D. incarcerata (Berk. & Broome) Nitschke – *Rosa* sp. Sep 1916. TAAM 202353. – 491.
 D. leiphaemia (Fr.) Sacc. – *Quercus* sp. Apr 1917. TAAM 202352. – 490.
 D. nigricolor Nitschke – *Rhamnus frangula*. TAAM 202351. – 489.
 D. salicella (Fr.) Sacc. – *Salix* sp. Mar 1912. TAAM 202358. – 496.
 D. sorbicola (Nitschke) Bref. & Tavel – *Sorbus domestica*. Jan 1920. TAAM 202354. – 492.
 D. strumella (Fr.) Fuckel – *Ribes rubrum*. 1910. TAAM 202357. – 495.
Diatrype bullata (Hoffm.) Fr. – *Populus tremula*. May 1916. TAAM 202237. – 499.
 D. bullata (Hoffm.) Fr. – *Salix cinerea*. Aug 1911. TAAM 202236. – 500.
 D. disciformis (Hoffm.) Fr. – *Fagus sylvatica*. Sep 1909. TAAM 202479. – 498.
 D. stigma (Hoffm.) Fr. – *Pyrus* sp. Mar 1916. TAAM 202235. – 497.
Diatrypella favacea (Fr.) Ces. & De Not. – *Betula* sp. Apr 1916. TAAM 202301. – 438.
 D. pulvinata Nitschke – *Quercus* sp. Nov 1913. TAAM 202302. – 439.
 D. tocciaeana De Not. – *Alnus glutinosa*. Oct 1918. TAAM 202303. – 440.
 D. verruciformis (Ehrh.) Nitschke – *Alnus* sp., on a twig. Mar 1913. TAAM 202304. – 441.
Didymaria didyma (Unger) Pound – *Ranunculus repens*. Oct 1912. TAAM 202239. – 390.
 D. lindaviana Jaap – *Vicia cracca*. Aug 1909. TAAM 202240. – 391.
Didymella oleandrina Theiss. & Syd. – *Nerium oleander*. TAAM 202440. – 419.
 D. rehmiana Bäumler – *Euphorbia palustris*. Sep 1907. TAAM 202441. – 420.
Didymosphaeria conoidea Niessl – *Angelica sylvestris*. TAAM 202310. – 449.
 D. conoidea Niessl – *Euphorbia palustris*. 1923. TAAM 202311. – 450.
Diplodium uniseptatum Lindau – *Salix* sp. Oct 1915. TAAM 202421. – 410.
Discosia artocreas (Tode) Fr. – *Quercus* sp. Nov. 1909. TAAM 202578. – 722.
 D. strobilina Lib. ex Sacc. – *Picea excelsa*. Nov. 1909. TAAM 202579. – 723.
Ditopella ditopa (Fr.) J. Schröt. – *Alnus* sp. Feb 1902. TAAM 202306. – 443.
Dothidea natans A. Zahlbr. – *Sambucus nigra*. TAAM 202648. – 862.
 D. ulmi (C.-J. Duval) Fr. – *Ulmus campestris*. TAAM 202595. – 739.
Dothidella betulina (Fr.) Sacc. – *Betula alba*. Austria, Tirolia. Leg. ? TAAM 202597. – 741.
Dothiorella gregaria Sacc. – *Fraxinus excelsior*. Feb 1908. TAAM 202626. – 845.
 D. pini-silvestris Allesch. – *Pinus strobus*. Mar 1902. TAAM 202628. – 847.
 D. pithyophila Bres. & Sacc. – *Picea excelsa*. Apr 1911. TAAM 202627. – 846.
Ectostroma liriodendri (Kunze) Fr. – *Liriodendron tulipifera*. Oct 1917. TAAM 202512. – 601.
Entyloma chrysosplenii (Berk. & Broome) J. Schröt. – *Chrysosplenium alternifolium*. Sep 1910. TAAM 202411. – 313.
 E. corydalii de Bary – *Corydalis* sp. Apr 1913. TAAM 202412. – 314.
 E. linariae J. Schröt. – *Linaria vulgaris*. Oct 1907. TAAM 202413. – 315.
 E. ranunculi (Bonord.) J. Schröt. – *Ranunculus ficaria*. May 1912. TAAM 202414. – 316.

- E. serotinum J. Schröt. – *Symphytum officinale*. TAAM 202416. – 318.
 E. serotinum J. Schröt. – *Symphytum* sp. Sep 1913. TAAM 202415. – 317.
Entyloma sp. – *Phoenix dactylifera*. TAAM 202417. – 319.
 E. thalictri J. Schröt. – *Thalictrum aquilegiifolium*. Russia, Orlov. 15 Aug 1915. TAAM 202490. – 537.
Epicoccum diversisporum Preuss – *Phragmites communis*. 1908. TAAM 202572. – 716.
 E. neglectum Desm. – *Zea mays*. Nov 1913. TAAM 202516. – 605.
 E. purpurascens Ehrenb. – *Zea mays* Jan 1912. TAAM 202517. – 606.
 E. vulgare Corda – *Typha latifolia*. Apr 1917. TAAM 202518. – 607.
Euryachora thoracella (Rutstr.) J. Schröt. – *Sedum maximum*. Jun 1916. TAAM 202649. – 863.
Exosporium hysterioidea (Corda) Höhn. – *Alnus glutinosa*, on rotten bark. TAAM 202574. – 718.
Fenestella lycii (Duby) Sacc. – *Lycium barbarum*. Feb 1904. TAAM 202337. – 487.
Fumago salicina (Pers.) Tul. & C. Tul. – *Populus tremula*. TAAM 202330. – 596.
F. vagans Pers. – *Lonicera* sp. Oct 1907. TAAM 202334. – 295.
F. vagans Pers. – *Lonicera* sp. Oct 1907. TAAM 202502. – 595.
Fusarium nivale (Fr.) Sorauer – on young plants. TAAM 202571. – 715.
F. solani (Mart.) Sacc. – *Solanum tuberosum*, on rotten potatoes. Dec 1911. TAAM 202570. – 714.
Fusicladium depressum (Berk. & Broome) Sacc. – *Angelica sylvestris*. Aug 1919. TAAM 202569. – 713.
F. orbiculatum (Desm.) Thüm. – *Sorbus terminalis*. Jun 1916. TAAM 202568. – 712.

F. pirinum (Lib.) Fuckel – *Pyrus* sp. Mar 1913. (207). TAAM 202214. – 305.
Fusicoccum carpini Sacc. – *Carpinus betulus*. Aug 1909. TAAM 202629. – 848.
Gibberella straussii (nom. ined.) – *Erica carnea*. TAAM 202492. – 505.
Gibberella baccata (Wallr.) Sacc. – *Cytisus laburnum*. Jul 1911. (209). TAAM 202656. – 293.
G. moricola (Ces. & De Not.) Sacc. – *Morus nigra*. Sep 1913. (212). TAAM 202458. – 296.
G. pulicaris (Fr.) Sacc. – *Sambucus nigra*. Dec 1909. (208). TAAM 202655. – 292.
Gloeosporium lindemuthianum Sacc. & Magn. – *Pisum sativum*. (232). TAAM 202250. – 338.
Gnomonia errabunda (Roberge ex Desm.) Auersw. – *Quercus* sp., on leaves. Apr 1912. TAAM 202316. – 502.
G. leptostyla (Fr.) Ces. & De Not. – *Juglans regia*. Feb 1910. TAAM 202361. – 501.
G. needhamii Massee & Crossl. – *Picea abies*. TAAM 202318. – 504.
G. rubi Rehm – *Rubus* sp., on a stem. 1912. TAAM 202317. – 503.
G. setacea (Pers.) Ces. & De Not. – *Quercus* sp., on leaves. May 1916. – TAAM 202341. – 488.
Gnomoniella melanostyla (DC.) Sacc. – *Tilia* sp., on leaves. Dec 1916. TAAM 202319. – 506.
Gnomoniella tubiformis (Tode) Sacc. – *Alnus* sp. TAAM 202320. – 507.
Hadrotrichum phragmitis Fuckel – *Phragmites communis*. Sep 1907. TAAM 202331. – 592.
H. phragmitis Fuckel – *Phragmites communis*. Sep 1913. TAAM 202333. – 592-a.
Haplographium chlorocephalum (Fresen.) Grove – *Chaerophyllum* sp. TAAM 202332. – 593.
Hartigia lariniae (R. Hartig) P. Syd. – *Larix* sp. TAAM 202373. – 388.
Helminthosporium tiliae Fr. – *Tilia* sp. May 1918. TAAM 202329. – 594.
Hendersonia canina Brunaud – *Rosa canina*. May 1917. TAAM 202622. – 841.
H. foliorum Fuckel – *Quercus ilex*. Apr 1902. TAAM 202625. – 844.
H. piriformis G.H. Otth – auf Aesthen von Blutbuche. Mar 1917. TAAM 202624. – 843.
H. sambuci Müll.(?) – *Sambucus nigra*. Feb 1908. TAAM 202623. – 842.
Herpotrichia mutabilis (Pers.) G. Winter – On rotten wood. Aug 1906. TAAM 202321. – 508.
H. nigra R. Hartig – *Juniperus nana*. TAAM 202322. – 509.
Heterosporium echinulatum (Berk.) Cooke – *Silene inflata*. Oct 1907. TAAM 202674. – 612.
H. gracile (Wallr.) Sacc. – *Iris* sp. 17 Sep 1917. (146 – but this is not the no. in Exsiccata; 231). TAAM 202249. – 337.
H. variabile Cooke – *Spinacia oleracea*. TAAM 202675. – 613.
Hormiscium laxum Wallr. – *Solanum* sp. May 1915. TAAM 202676. – 614.
Hyphella subcorticalis Pers. – *Populus*, unter der Rinde. Dec 1916. TAAM 202651. – 288.
Hypocrea citrina (Pers.) Fr. – auf der Erde. Aug 1912. TAAM 202639. – 858.
H. contorta (Schwein.) Berk. & M.A. Curtis – *Fagus* sp. Sep 1915. TAAM 202638. – 857.
Hypoderma hederae (T. Nees ex Mart.) De Not. – *Hedera helix*. Oct 1913. TAAM 202480. – 474.
H. scirpinum Pers. ex DC. – *Schoenoplectus lacustris*. TAAM 202463. – 476.
H. virgultorum DC. – *Rubus* sp., on a stem. Sep 1915. TAAM 202238. – 475 (!).
Hypodermella laricis Tubeuf – *Larix europaea*. TAAM 202338. – 480.
Hypomyces aurantius (Pers.) Fuckel – *Polyporus versicolor*. Sep 1913. TAAM 202637. – 856.
Hypospila pustulata (Pers.) P. Karst. – *Quercus* sp., on leaves. May 1911. TAAM 202406. – 529.
Hypoxyylon coccineum Bull. – *Fagus sylvatica*, on bark. Oct 1909. TAAM 202323. – 510.
H. cohaerens (Pers.) Fr. – *Fagus sylvatica*, on bark. TAAM 202326. – 513.
H. crustaceum (Sowerby) Nitschke – *Fagus sylvatica*, on an old stump. Oct 1908. TAAM 202324. – 511.
H. fuscum (Pers.) Fr. – *Fagus sylvatica*, on bark. Aug 1917. TAAM 202327. – 514.
H. rubiginosum (Pers.) Fr. – *Fagus sylvatica*. Aug 1910. TAAM 202328. – 515.
H. tubulina (Alb. & Schwein.) Fr. – *Alnus* sp. Sep 1919. TAAM 202325. – 512.
Hysterium angustatum Alb. & Schwein. – *Betula* sp., on bark. Jul 1912. TAAM 202220. – 477.
H. pulicare Pers. – *Alnus* sp., on bark. 1916. TAAM 202221. – 479.
H. pulicariae Pers. – *Pinus sylvestris*. Mar 1910. TAAM 202222. – 478.
Hysterographium fraxini (Pers.) De Not. – *Fraxinus excelsior*. May 1917. TAAM 202339. – 481.
Isaria farinosa (Holmsk.) Fr. – Auf Scmetterlings puppe. Nov 1911. TAAM 202515. – 604.
Isariopsis alborosella (Desm.) Sacc. – *Cerastium triviale*. (Possibly Estonia, Saaremaa Is.; cf. Bucholtz, 1916: 32). May 1909. TAAM 202573. – 717.
Laestadia carpinea (Fr.) Sacc. – *Carpinus* sp., on leaves. Apr 1917. TAAM 202433. – 516.
L. punctoidea (Cooke) Auersw. – *Quercus* sp., on leaves. Mar 1919. TAAM 202434. – 517.
Lasiobotrys lonicerae (Fr.) Fr. – *Lonicera caerulea*. TAAM 202425. – 421.
Leptosphaeria acuta (Moug. & Nestl.) P. Karst. – *Urtica* sp., on stems. Jul 1917. TAAM 202388. – 565.
L. agnita (Desm.) De Not. & Ces. – *Eupatorium cannabinum*. Aug 1917. TAAM 202390. – 568.
L. arundinacea (Sowerby) Sacc. – *Phragmites communis*. Mar 1916. TAAM 202477. – 571.

- L. coniothyrium (Fuckel) Sacc. – Rubus sp., on a stem. Apr 1913. TAAM 202389. – 570.
- L. derasa (Berk. & Broome) Thüm. – Centaurea jacea. TAAM 202397. – 567.
- L. doliolum (Pers.) Ces. & De Not. – Urtica sp., on stems. Oct 1915. TAAM 202394. – 572.
- L. libanotis (Fuckel) Niessl – Heracleum sphondylium. Sep 1917. TAAM 202392. – 569.
- L. millefolii (Fuckel) Niessl – Achillea millefolium. TAAM 202393. – 575.
- L. purpurea Rehm – Cirsium arvense, on stems. Jan 1916. TAAM 202396. – 574.
- L. suffulta (Nees) Niessl – Melampyrum sp. TAAM 202391. – 566.
- L. vagabunda Sacc. – Rubus fruticus, on stems. Apr 1913. TAAM 202395. – 573.
- Leptospora ovina (Pers.) Fuckel – On a rotten stump. Jul 1909. TAAM 202299. – 483.
- L. spermoides (Hoffm.) Fuckel – Alnus sp., on a stump. Mar 1911. TAAM 202300. – 484.
- Leptostromella aquilina C. Massal. – Pteridium aquilinum ("Pteris"). TAAM 202582. – 726.
- Leptothyrella mougeotiana Sacc. & Roum. – Pinus strobus. Apr. 1907. TAAM 202587. – 731.
- Linospora capreae (DC.) Fuckel – Salix caprea. TAAM 202335. – 485.
- Lophiostoma macrostomum (Tode) Ces. & De Not. – Quercus sp. Aug 1909. TAAM 202336. – 486.
- Lophium mytilinum s. Stevens – Pinus sylvestris. Mar 1909. TAAM 202340. – 482.
- Lophodermium juniperinum (Fr.) De Not. – Juniperus communis. Jun 1914. TAAM 202247. – 470.
- L. juniperinum (Fr.) De Not. – Juniperus nana. Aug. 1915. TAAM 202504. – 471.
