**Abstract:** The lichen diversity of the proposed protected area Pukhtolova Gora counts 252 species, including 232 lichenized, 12 lichenicolous, and 8 non-lichenized saprobic fungi. *Micarea laeta*, *M. pusilla*, and *Pyrenidium actinellum* s. lat. are new to North-Western European Russia; *Parmelia serrana*, *Rhizocarpon cinereovirens*, and *Stereocaulon taeniarium* are new to St. Petersburg. Altogether 13 species recorded in the study area are red-listed in St. Petersburg, with two of them known only from historical collections. Pukhtolova Gora is an area with a high conservation value; the lichen biota of this area is one of the richest within the city limits due to the well-preserved forest habitats.

**Keywords:** Isthmus karelicus, protected areas, lichen diversity, red-listed species

## INTRODUCTION

The present paper continues a series of lichen inventories of the existing and proposed protected areas of St. Petersburg (see e. g., Himelbrant et al., 2005; Stepanchikova et al., 2014, 2020). The presented list of taxa comprises revised historical data and results of our own field investigations.

Pukhtolova Gora proposed protected area is a part of former Finnish socken (parish) Terijoki which was intensively studied in the past both by Russian and Finnish lichenologists. However, old labels are often not detailed enough, so only some historical records can be more or less confidently attributed to the certain territory. In 1907, the first lichen specimens from Puhtula were collected by V. P. Drobov and B. O. Kashmensky. These specimens contain several widespread macrolichens (namely, *Cetraria islandica*, *Cladonia rangiferina*, *C. stellaris*, *Peltigera aphthosa*, *Pseudevernia furfuracea*, and *Stereocaulon tomentosum*), the list was published in a small educational brochure (Vereitinov & Kashmensky, 1907). The next lichen collection from Puhtula was made by Lars F. Fagerström, mostly in 1938, in course of his comprehensive inventory of Terijoki socken (Fagerström, 1945). In 1939, several specimens were also collected by Sten Ahlner (Ahlner, 1948). Summarizing the results obtained from critical revision of herbarium collections and literature

records, a total of 34 species are known from the study area for the first half of the 20th century. The majority of them (29 species) were collected by Fagerström (1945) and Ahlner (1948).

Our field research was conducted as a part of a comprehensive inventory of biodiversity, communities, and landscapes of the proposed protected area. The obtained information is used to organize new protected areas and to refine the protective measures for existing ones. Moreover, the data on local populations of rare and endangered species will be useful for future update of the regional Red Data Book.

## MATERIAL AND METHODS

### Study area

The proposed protected area “Pukhtolova Gora” (Fig. 1–2) occupies an area of ca. 4 km<sup>2</sup> in the northern part of Kurortny District of St. Petersburg, in southern vicinities of the village Reshetnikovo (former Puhtula, Terijoki) and the settlement Roschcino (Raivola), northeast of the Ushkovo railway station. According to the biogeographical subdivision of Eastern Fennoscandia (Kotiranta et al., 1998), it belongs to Isthmus karelicus (Ik). The landscape of the study area is represented by sandy plains and hills formed by Quaternary lake-glacial sediments, the highest point is the hill Pukhtolova (Bolshaya Komandnaya, Puhtulanmäki),

100.8 m a. s. l., situated in the southeastern part of the area. Two small water bodies are located in the eastern part of the study area: Lake Ilistroe (Likolampi), ca. 0.03 km<sup>2</sup>, and a small pond.

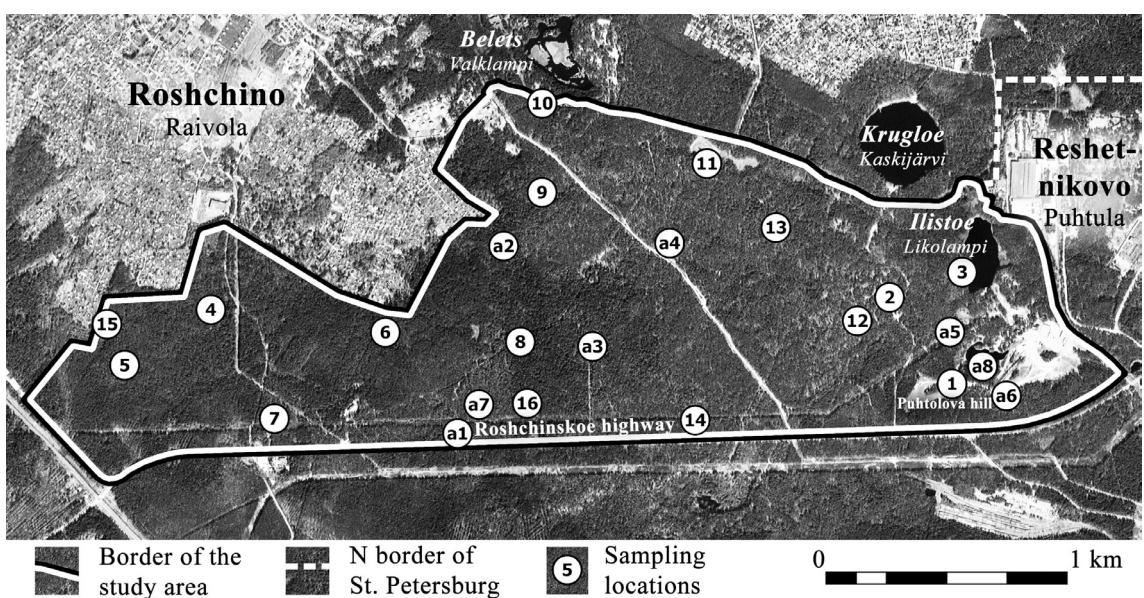

**Fig. 1.** The study area, Puhtolova Gora in the limits of St. Petersburg.

Pukhtolova Gora has always been relatively undisturbed area used mainly for recreation by the residents of nearby settlements and villages.

In the end of the 19th – beginning of the 20th century the territory was partly occupied by dachas (villas), and a sand pit was made in the southeastern part of the area. In 20th century military objects existed here (Khramtsov, 2021). However, most part of the area has always been covered by natural vegetation, though disturbed by local buildings, roads, and cuttings. Nowadays, the plant communities of Pukhtolova Gora are represented mainly by middle-aged pine and spruce forests, mixed stands, and swamps. The most part of the territory is a moderate recreation area, like hiking and skiing; the slope of the Pukhtolova hill and an area of former sand pit are used by ski resort.

#### Data collection

The material was collected in 2010 and 2020 by Irina S. Stepanchikova (IS), Dmitry E. Himelbrant (DH), and Ekaterina S. Kuznetsova (EK) within the proposed protected area Pukhtolova Gora. We investigated 16 standard sample areas (SA), of 20 × 20 m (or within natural boundaries of the community if the community covered smaller area), where the lichen diversity of each substrate was described comprehensively, and 8 additional plots (AP), where only individual substrates or species were checked (Appendix 1). The specimens are deposited in H and LECB. DH, IS, EK, and Viktoria Pankova identified the

**Fig. 2.** The investigated locations within the study area (see Appendix 1).

majority of specimens, Liudmila A. Konoreva and Sergey V. Chesnokov identified most of the *Micarea* specimens; if otherwise, the author of identification is indicated. Additionally, the material collected by Fagerström (LF), Ahlner, Kashmensky & Drobov in vicinity of Puhtula was revised (herbaria H, S, and LE, respectively); such data are given in the species list without indication of the locality.

In the species list the nomenclature of taxa generally follows Nordin et al. (2011). For each species the substrates and localities are listed. Species new to St. Petersburg (and not known in the Leningrad Region) or larger regions are supplied with information on diagnostic characteristics and distribution in North-Western European Russia, Fennoscandia and the Baltic countries. Lichen substances are given for HPTLC-analyzed species. Chromatography was performed according to standard techniques of high performance thin-layer chromatography using solvent system C (Orange et al., 2001).

In the species list the following symbols and abbreviations are used:

- (a) ecological groups of fungi: # – lichenicolous fungi and protists, (#) – facultatively lichenicolous fungi, + – non-lichenized fungi;
- (b) noteworthy records: ! – regionally protected species (Red..., 2018), § – habitat specialists, \* – indicator species (Andersson et al., 2009), † – species known from historical data only;
- (c) regions: LR – Leningrad Region, WLR – Western Leningrad Region, SPb – St. Petersburg;
- (d) frequency of occurrence for the species collected in 2010–2020 by the authors: [R<sub>1</sub>] – single record (the species was found once), [R] – rare (the species was recorded in 2–3 SA, i.e. up to 20% of the total number of SA or more than in one additional plot), [O] – occasionally (in 4–6 SA, up to 40%), [F] – frequent (in 7–9 SA, up to 60%), [C] – common (in 10–12 SA, up to 80%), [VC] – very common (in 13–16 SA, over 80%);
- (e) abbreviations of the collectors' names – see above.

## RESULTS & DISCUSSION

The species

*ABSCONDITELLA DELUTULA* (Nyl.) Coppins & H. Kilias – on plant debris; 2 [R<sub>1</sub>].

*ABSCONDITELLA LIGNICOLA* Vězda & Pišút – on wood of *Picea abies* (L.) Karst.; 8 [R<sub>1</sub>].

*ACAROSPORA FUSCATA* (Schrad.) Th. Fr. – on granite; 7, 9, 12 [R].

*ACAROSPORA GLAUOCARPA* (Ach.) Körb. – on granite and concrete; 2, 7, 9, 10, a1 [O].

*ACAROSPORA MOENIUM* (Vain.) Räsänen – on concrete; 2, a1 [R].

!† *ANAPTYCHIA CILIARIS* (L.) Körb. – coll. LF: on bark of *Populus tremula* L., 09.06.1938 (Fagerström, 1945; H 8003920). EN, 2 (Red..., 2018).

*ANISOMERIDIUM POLYPORI* (Ellis & Everh.) M. E. Barr – on bark of *Populus tremula*; 15 [R<sub>1</sub>].

# *ARTHONIA BIATORICOLA* Ihlen & Owe-Larss. – on thallus of *Biatora pallens* on branches of young *Picea abies*; a8 [R<sub>1</sub>].

!\* *ARTHONIA HELVOLA* (Nyl.) Nyl. – on wood of *Picea abies*; 6 [R<sub>1</sub>]. NT, 4 (Red..., 2018).

*ARTHONIA MEDIILLA* Nyl. – on bark of *Populus tremula*; 14 [R<sub>1</sub>].

*ARTHONIA PUNCTIFORMIS* Ach. – on bark of *Betula* sp. and *Populus tremula*; 12, 15 [R].

*ASPICILIA CINEREA* (L.) Körb. – on granite; 12 [R<sub>1</sub>].

*ATHALLIA CERINELLOIDES* (Erichsen) Arup et al. – on bark of *Populus tremula*; 2 [R<sub>1</sub>].

*ATHALLIA HOLOCARPA* (Hoffm.) Arup et al. – on concrete; 2 [R<sub>1</sub>].

*ATHALLIA PYRACTHEA* (Ach.) Arup et al. – on bark of *Populus tremula*; 2, 12, 14, 15 [O].

*BACIDIA ARCEUTINA* (Ach.) Arnold – on bark of *Populus tremula*; 2 [R<sub>1</sub>].

*BACIDINA CHLOROTICULA* (Nyl.) Vězda & Poelt – on bark of *Acer platanoides* L. and *Vaccinium myrtillus* L. on brick; 12, 15 [R].

*BACIDINA MODESTA* (Zwackh ex Vain.) S. Ekman – on bark of *Padus avium* Mill.; 15 [R<sub>1</sub>].

*BAEOMYCES CARNEUS* Flörke – on sand; 1 [R<sub>1</sub>].

*BAEOMYCES RUFUS* (Huds.) Rebent. – on granite, sand and soil; 1, 2, 10, 12 [O].

*BIATORA CHRYSANTHA* (Zahlbr.) Printzen – on bark of *Sorbus aucuparia* L.; 8 [R<sub>1</sub>].

*BIATORA EFFLORESCENS* (Hedl.) Räsänen – on bark of *Acer platanoides*, *Betula* sp., *Padus avium*,

*Populus tremula*, and *Sorbus aucuparia*; 8, 12, 14–16 [O].

BIATORA HELVOLA Körb. ex Hellb. – on bark of *Salix* sp.; 3 [R<sub>1</sub>].

BIATORA OCELLIFORMIS (Nyl.) Arnold – on bark of *Pinus sylvestris* L.; 1 [R<sub>1</sub>].

BIATORA PALLENS (Kullh.) Printzen – on bark of *Picea abies*; a8 [R<sub>1</sub>].

BILIMBIA MICROCARPA (Th. Fr.) Th. Fr. – on concrete roof of the blindage; 7 [R<sub>1</sub>].

BILIMBIA SABULETORUM (Schreb.) Arnold – on clayey soil; 7 [R<sub>1</sub>].

BRYORIA CAPILLARIS (Ach.) Brodo & D. Hawksw. – on bark of *Pinus sylvestris*; 1 [R<sub>1</sub>]. Coll. LF: on bark of *Sorbus aucuparia*, 09.06.1938 (H 8003300, sub *Pseudevernia furfuracea*).

BRYORIA FUSCESCENS (Gyeln.) Brodo & D. Hawksw. – on bark of *Betula* sp., *Pinus sylvestris*, *Populus tremula*, *Salix* sp., and *Sorbus aucuparia*, on wood of *Pinus sylvestris*; 1, 2, 14 [R].

BUELLIA GRISEOVIRENS (Turner & Borrer ex Sm.) Almb. – on bark of *Alnus incana* (L.) Moench, *Betula* sp., *Populus tremula*, and *Sorbus aucuparia*; 11, 12, 14, 15 [O].

CALICIUM GLAUCELLUM Ach. – on wood of *Pinus sylvestris*; 11 [R<sub>1</sub>].

CALICIUM PINASTRI Tibell – on bark of *Pinus sylvestris*; 5, 9, 12 [R].

CALICIUM TRABINELLUM (Ach.) Ach. – on wood of *Pinus sylvestris*; 11 [R<sub>1</sub>].

CALOPLACA CERINA (Hedw.) Th. Fr. – on bark of *Populus tremula*; 15 [R<sub>1</sub>]. Coll. LF: on bark of *Populus balsamifera* L., 09.06.1938 (H 8005539, sub *Physconia distorta*).

CANDELARIELLA EFFLORESCENS R. C. Harris & W. R. Buck – on bark of *Populus tremula*; 14, 15 [R].

CANDELARIELLA LUTELLA (Vain.) Räsänen – on bark of *Populus tremula*; 2 [R<sub>1</sub>].

CANDELARIELLA REFLEXA (Nyl.) Lettau – on bark of *Populus tremula*; 12 [R<sub>1</sub>].

CANDELARIELLA XANTHOSTIGMA (Ach.) Lettau – on bark of *Populus tremula*; 12, 14 [R].

CATILLARIA NIGROCLAVATA (Nyl.) Schuler – on bark of *Populus tremula*; 2, 3, 14 [R].

CETRARIA ISLANDICA (L.) Ach. subsp. ISLANDICA – on bark and wood of *Pinus sylvestris*, on sandy soil; 1, 2, 9, 12, 14, a2, a3 [O]. Coll. B. O. Kashmensky (Vereitinov & Kashmensky, 1907).

CETRARIA SEPINCOLA (Ehrh.) Ach. – on bark of *Betula* sp., *Pinus sylvestris*, *Populus tremula*, and *Salix* sp., on wood of *Pinus sylvestris*; 1–3, 11, 12, 14 [O].

CETRARIELLA COMMIXTA (Nyl.) A. Thell & Kärnefelt – on granite; a4 [R<sub>1</sub>].

CHAENOTHECA CHRYSOCEPHALA (Turner ex Ach.) Th. Fr. – on bark of *Picea abies*; 16 [R<sub>1</sub>].

CHAENOTHECA FERRUGINEA (Turner ex Sm.) Mig. – on bark of *Betula* sp., *Picea abies*, and *Pinus sylvestris*; 4, 6, 8, 16 [O].

!\* CHAENOTHECA STEMONEA (Ach.) Müll. Arg. – on wood of *Picea abies*; 16 [R<sub>1</sub>]. VU, 3 (Red..., 2018).

CHAENOTHECA TRICHIALIS (Ach.) Th. Fr. – on wood of *Pinus sylvestris*; 5, 11 [R].

CHAENOTHECA XYLOXENA Nádv. – on wood of *Pinus sylvestris*; 9 [R<sub>1</sub>].

#\* CHAENOTHECOPSIS EPITHALLINA Tibell – on thallus of *Chaenotheca trichialis* on wood of *Pinus sylvestris*; 5 [R<sub>1</sub>].

+\* CHAENOTHECOPSIS NIGRA Tibell – on bark of *Picea abies*; 16 [R<sub>1</sub>].

LECANORA POPULICOLA (DC.) Duby – on bark of *Populus tremula*; 12, 15 [R].

LECANORA PULICARIS (Pers.) Ach. – on bark of *Alnus incana*, *Betula* sp., *Corylus avellana* (L.) H. Karst., *Juniperus communis*, *Pinus sylvestris*, *Populus tremula*, *Salix* sp., and *Sorbus aucuparia*; 1–4, 12, 14, 15 [F].

LECANORA SUBINTRICATA (Nyl.) Th. Fr. – on bark of *Pinus sylvestris* and *Sorbus aucuparia*; 5, 11, 14 [R].

LECANORA SYMMICTA (Ach.) Ach. – on bark of *Padus avium*, *Pinus sylvestris*, *Populus tremula*,

and *Salix* sp., on wood of conifers; 1–3, 8, 11, 12, 14, 15 [F].

LECANORA UMBRINA (Ach.) A. Massal. – on bark of *Populus tremula* and *Salix* sp.; 2, 3, 12, 15 [O].

LECIDEA NYLANDERI (Anzi) Th. Fr. – on bark of *Betula* sp., *Padus avium*, *Picea abies*, *Pinus sylvestris*, and *Sorbus aucuparia*, on wood of *Pinus sylvestris*; 1, 2, 4–6, 8, 9, 11–16 [VC].

LECIDEA TURGIDULA Fr. – on bark of *Pinus sylvestris* and on wood of conifers; 4, 5, 11, 13, 16 [O].

LECIDELLA ELAEOCROMA (Ach.) M. Choisy – on bark of *Padus avium*, *Populus tremula*, and *Sorbus aucuparia*; 2, 12, 14, 15 [O].

LECIDELLA EUPHOREA (Flörke) Hertel – on bark of *Populus tremula*; 2, 15 [R].

LECIDELLA MEIOCOCCA (Nyl.) Leuckert & Hertel – on granite; 7 [R<sub>1</sub>].

LEPRARIA ELOBATA Tønsberg – on bark of *Alnus incana*, *Betula* sp., *Corylus avellana*, *Juniperus communis*, *Picea abies*, *Pinus sylvestris*, and *Sorbus aucuparia*, on granite and sandy soil; 1, 4, 6, 8, 10, 14–16 [F].

LEPRARIA INCANA (L.) Ach. – on bark of *Betula* sp., *Juniperus communis*, *Picea abies*, *Pinus sylvestris*, *Populus tremula*, and *Sorbus aucuparia*, on wood of *Picea abies*; 1–6, 8, 12–16 [C].

LEPRARIA JACKII Tønsberg s. lat. – on bark of *Betula* sp., *Juniperus communis*, *Picea abies*, and *Pinus sylvestris*; 1, 6, 8, 14, 16 [O].

LEPRARIA LOBIFICANS Nyl. – on bark of *Betula* sp., *Picea abies*, and *Pinus sylvestris*; 6, 12, 16 [R].

LEPRARIA NEGLECTA (Nyl.) Lettau – on granite and mosses; 9, 12, a4 [R]. Thalli contain alectorialic acid.

LEPTORAPHIS ATOMARIA (Ach.) Szatala – on bark of *Populus tremula*; 3, 15 [R].

+ LEPTORAPHIS EPIDERMIDIS (Ach.) Th. Fr. – on bark of *Betula* sp.; 9, 14 [R].

# LICEA PARASITICA (Zukal) G. W. Martin – on thallus of *Physcia aipolia* on bark of *Populus tremula*; 14 [R<sub>1</sub>].

# LICHENOCONIUM ERODENS M. S. Christ. & D. Hawksw. – on thallus of *Hypogymnia physodes* on bark of *Pinus sylvestris*; 12 [R<sub>1</sub>].

LOXOSPORA ELATINA (Ach.) A. Massal. – on bark of *Picea abies*; 8 [R<sub>1</sub>]. Coll. S. Ahlner: on bark of *Pinus sylvestris*, 20.08.1939 (S F-138936).

MELANELIXIA SUBAURIFERA (Nyl.) O. Blanco et al. – on bark of *Acer platanoides*, *Padus avium*, *Populus tremula*, *Salix* sp., and *Sorbus aucuparia*; 2, 12, 15 [R]. Coll. LF: on bark of *Sorbus aucuparia*, 09.06.1938 (H 8005427).

MELANOHALEA EXASPERATA (De Not.) O. Blanco et al. – on bark of *Populus tremula*; 15 [R<sub>1</sub>].

MELANOHALEA EXASPERATULA (Nyl.) O. Blanco et al. – on bark of *Betula* sp., *Pinus sylvestris*, *Populus tremula* and *Sorbus aucuparia*; 1, 2, 12, 15 [O].

MELANOHALEA OLIVACEA (L.) O. Blanco et al. – on bark of *Populus tremula* and *Sorbus aucuparia*; 12, 14 [R]. Coll. LF: on bark of *Sorbus aucuparia*, 09.06.1938 (H 8003302, sub *Pseudevernia furfuracea*).

MICAREA BYSSACEA (Th. Fr.) Czarnota et al. – on bark of *Betula* sp. and *Picea abies*; 6, 9, 16 [R]. Thalli contain methoxymicareic acid.

MICAREA DENIGRATA (Fr.) Hedl. – on bark and wood of *Pinus sylvestris*, on wood of *Picea abies*; 1, 5, 9, 12 [O]. Thalli contain gyrophoric acid.

MICAREA ERRATICA (Körb.) Hertel et al. – on granite; 1, 9 [R].

MICAREA LAETA Launis & Myllys – on wood of *Picea abies*; 4, 8 [R]. Thalli contain methoxymicareic acid. – New to North-Western European Russia (see also Himelbrant et al., 2021). Distribution in Fennoscandia and Baltic countries: Sweden and Finland (Launis et al., 2019; Kantelin et al., 2021). The species belongs to *Micarea prasina* group. Characterized by usually granular or almost continuous vivid green to olive-green thallus composed of goniocysts, adnate, cream-white or sometimes brownish, usually numerous apothecia, K- (no Sedifolia-grey), ellipsoid 0–1-septate ascospores 3–4 µm wide, and production of methoxymicareic acid (Kantelin et al., 2021).

MICAREA MELAENA (Nyl.) Hedl. – on bark of *Betula* sp. and *Pinus sylvestris*, on wood of *Pinus sylvestris*; 1, 4–6, 8, 14, 16 [F].

MICAREA cf. MICROAREOLATA Launis et al. – on bark of *Betula* sp. and *Vaccinium myrtillus*; 5, 8 [R]. The specimens are fully consistent with the description by morphology and anatomy, but they are too small to be analyzed by TLC.

MICAREA NITSCHKEANA (J. Lahm ex Rabenh.) Harm. – on bark of *Betula* sp. and *Corylus avellana*, also on wood of *Pinus sylvestris*; 1, 4, 13 [R]. Thalli contain gyrophoric acid.

MICAREA PRASINA Fr. s. str. – on bark of *Picea abies* and on wood of *Pinus sylvestris*; 4–6, 12 [O]. Thalli contain micareic acid.

MICAREA PUSILLA Launis et al. – on bark of *Betula* sp.; 12 [R<sub>1</sub>]. Thallus contains methoxymicareic acid. – New to North-Western European Russia (see also Himelbrant et al., 2021). Characterized by whitish green to olive green, usually inconspicuous, membranous, or warted-granular thallus, numerous, very small creamy or white apothecia, and small inconspicuous pycnidia, along with production of methoxymicareic acid (Launis et al., 2019).

!§+ MICROCALICUM AHLNERI Tibell – on bark and wood of *Picea abies*; 6, 16 [R]. CR, 1 (Red..., 2018).

! MONTANELIA SOREDIATA (Ach.) Divakar et al. – on granite; 12 [R<sub>1</sub>]. VU, 3 (Red..., 2018).

MYCOBILIMBIA CARNEOALBIDA (Müll. Arg.) S. Ekman & Printzen – on mosses; 15 [R<sub>1</sub>].

MYCOBILIMBIA EPIXANTHOIDES (Nyl.) Vitik. et al. – on wood of *Picea abies* and on mosses; 8, 15 [R].

PSEUDEVERNIA FURFURACEA (L.) Zopf – on bark of *Betula* sp., *Picea abies*, *Pinus sylvestris*, *Populus tremula*, and *Salix* sp., on wood; 1–3, 5, 9, 11, 13–16 [C]. Coll. LF: on bark of *Sorbus aucuparia*, 09.06.1938 (Fagerström, 1945; H 8003299, 8003300, 8003302); coll. B. O. Kashmensky (Vereitinov & Kashmensky, 1907).

PSEUDOSCHISMATOMMA RUFESCENS (Pers.) Ertz & Tehler – on bark of *Populus tremula*; 15 [R<sub>1</sub>].

PSIOLECHIA CLAVULIFERA (Nyl.) Coppins – on bark of *Picea abies*; 8 [R<sub>1</sub>].

PYCNORA SOROPHORA (Vain.) Hafellner – on bark and wood of *Pinus sylvestris*; 3, 9, 11–13 [O]. Coll. S. Ahlner: on bark of *Pinus sylvestris*, 20.08.1939 (S F-138936, sub *Loxospora elatina*).

# PYRENIDIUM ACTINELLUM Nyl. s. lat. – on thallus of *Baeomyces carneus* on small siliceous stone; 1 [R<sub>1</sub>]. – New to North-Western European Russia, the nearest locality in North-Western Russia is known in Komi Republic (Zhurbenko, 2004). Distribution in Fennoscandia and Baltic countries: Norway, Sweden, and Finland (Nordin et al., 2011). The species is characterized by immersed to almost sessile perithecioid ascomata, 0.15–0.23 mm in diam., sometimes aggregated in necrotic patches or gall-like deformations of the host thallus; ascospores ellipsoid to broadly fusiform, brown, (1–)3-septate, ± constricted at the septa (for the detailed description see Navarro-Rosines & Roux, 2007; Zhurbenko & Pino-Bodas, 2017; Huanraulek et al., 2019). By anatomy and morphology, our specimen is consistent with the description of *Pyrenidium actinellum* s. str. However, by host it differs from the type material, which was associated with *Scytinium teretiusculum*. The lichenicolous fungus *Pyrenidium actinellum* s. lat. is known to occur on different hosts, but recent studies (Huanraulek et al., 2019) show that the species in its wide sense is probably polyphyletic. Further taxonomical studies are needed to resolve the species delimitation within *Pyrenidium actinellum* complex.

XYLOPSORA FRIESII (Ach.) Bendiksby & Timdal – on bark of *Picea abies* and *Pinus sylvestris*; 4, 13, 16 [R].

### **Excluded and dubious taxa**

*Bryoria implexa* (Hoffm.) Brodo & D. Hawksw. – reported by Fagerström (1945) from bark of *Sorbus aucuparia*, but the specimen was not found. All available specimens by the same author from other areas within the Kurortny District of SPb were re-identified as other species of the genus (see Stepanchikova et al., 2020).

The currently known lichen diversity of the proposed protected area Pukhtolova Gora has a total of 252 species, including 232 lichenized, 12 lichenicolous and 8 non-lichenized saprobic fungi. *Micarea laeta*, *M. pusilla*, and *Pyrenidium actinellum* are new to North-Western European Russia; *Parmelia serrana*, *Rhizocarpon cinereo-virens*, and *Stereocaulon taeniarum* are new to St. Petersburg.

Altogether 13 red-listed (Red..., 2018) species were recorded in the study area, with two of them known only from historical collections. Eight species previously recorded in Pukhtolova Gora were not found in course of the last inventory: *Anaptychia ciliaris*, *Evernia mesomorpha*, *Ramalina dilacerata*, *Usnea barbata*, *U. glabrescens*, *U. lapponica*, *U. wasmuthii*. All these species are macrolichens, easy to find, and relatively sensitive to air pollution; they probably became extinct in the study area because of air pollution and disturbance of the forest communities.

Pukhtolova Gora remains a well-preserved forest territory within the city limits, and its lichen biota nowadays is one of the richest in St. Petersburg. The contemporary lichen biota of Pukhtolova Gora counts 244 species. This number was higher than in all other protected territories of St. Petersburg, except for Gladyshevsky protected area (Stepanchikova et al., 2014). The majority of the species in the study area occurred rarely [R] (169 species, 69.3%), 95 of which were recorded only once [R<sub>1</sub>], while 40 species (16.4% of the lichen flora) were occasional [O], 16 species (6.6%) frequent [F], 11 species (4.5%) common [C], and 8 species (3.3%), namely *Cladonia chlorophaea* s. lat., *C. coniocraea*, *Hypocenomyce scalaris*, *Hypogymnia physodes*, *Lecidea nylanderi*, *Parmeliopsis ambigua*, *Platismatia glauca*, *Vulpicida pinastri*, were very common [VC].

An average amount of species per standard SA was  $49.7 \pm 5.5$ , with minimum 26 (anthropogenic community, SA 7), and maximum 99 species (mixed forest, SA 12). The number of species per SA was predictably higher than in more disturbed territories along the seashore (Stepanchikova et al., 2020). However, it is high even compared to the other protected areas of Kurortny District which are also remote from the city and covered with forests, and even compared to relatively well-preserved areas outside St. Petersburg. For example, the same character for the nearby Gladyshevsky protected area was  $37.9 \pm 2.6$ , for Schuchje Lake –  $39.0 \pm 3.1$ , and for Smorodinka River valley (border of Priozersk and Vsevolozhsk districts of LR) –  $42.9 \pm 4.0$ .

Most lichens in Pukhtolova Gora grew on tree bark (149 species, 61.1% of the modern lichen biota), and preferred phorophytes were aspen (72 species, 29.5% of the modern lichen biota), pine (66 species, 27.0%), and birch (56 species, 23.0%). Lichens were quite common also on wood (73 species, 29.9%). The diversity of species inhabiting soil and plant debris was smaller (49 species, 20.1%). Saxicolous lichens were not very diverse as well, being 46 species (18.9% of the lichen diversity) in total: 37 species (15.2%) were recorded on granite, and 12 species (4.9%) on artificial substrates – concrete, brick, and slate. Thirteen species (5.3%) of lichenicolous fungi were recorded. In addition to the listed substrates, some species were also found on mosses (5 species), leather (4 species),

resin (2 species), and fruit bodies of polypores (1 species).

Most widespread in the study area were pine forests; these forests had moderately rich lichen biota (107 lichen species, 43.9% of the present-day lichen diversity of the study area). However, the richest communities with 150 species recorded (61.5% of the lichen biota) were the less common mixed forests. Anthropogenic habitats, such as rubbish dumps, old foundations, roadside boulders and glades also showed remarkable lichen diversity (118 species, 48.4% of the lichen biota).

The lichens of spruce forests were not very diverse and represented by 69 species (28.3% of the present-day lichen biota). Spruce stands in Pukhtolova Gora were mostly young or middle-aged, however, there were small pieces of relatively undisturbed wet spruce forests in lowlands. Several indicator species of biologically valuable forests (Andersson et al., 2009), namely *Chaenotheca stemonea*, *Chaenothecopsis nigra*, *Cladonia norvegica*, and *Microcalicium ahneri*, were found in one site (sample area 16). This site was represented by relatively undisturbed swampy spruce forest, which was quite unique for the territory of the megapolis. Such communities are almost absent now in the southern part of the Karelian Isthmus, both due to cuttings during the whole 20th century and to the development of the city suburbs. However, small wet lowlands around swamps and in river valleys were rarely subjected to cuttings and were not suitable for building, therefore these locations remained untouched even near huge cities, and so far, they might become local “biodiversity hot spots”.

## ACKNOWLEDGEMENTS

The authors are grateful to the Directorate of Nature Protected Areas of St. Petersburg, as well as to V. N. Khramtsov and E. A. Volkova (Komarov Botanical Institute of RAS, St. Petersburg) for support in organization of field studies. Sincere thanks to Teuvo Ahti (University of Helsinki) for his kind assistance during our work in H. We appreciate the help of colleagues in H and S during our work in herbaria. The authors also thank the Reviewers and Editors for valuable recommendations. The study was supported by Russian Foundation for Basic Research (grant 20-04-00473) and carried out within the framework

of the institutional research project “Flora and systematics of algae, lichens, and bryophytes of Russia and phytogeographically important regions of the world” (no. 121021600184-6) of the Komarov Botanical Institute of the Russian Academy of Sciences.

**Appendix 1.** List of the studied locations in Puhtolova Gora proposed protected area, Kurortny District, St. Petersburg

No	Description, geographical coordinates, biotope, collectors	Date
Standard sample areas:		
1	E part of the study area, NW slope of Pukhtolova hill (former Puhtulanmäki), 60°13'49"N, 29°40'39"E, disturbed blueberry-moss pine forest on the slope. DH, EK, IS.	22.05.2010, 31.10.2020
2	E part, the central artillery nest NW of Pukhtolova hill, 60°14'01"N, 29°40'23"E, anthropogenic meadow with single trees surrounded by disturbed blueberry-moss pine forest. DH, EK, IS.	22.05.2010
3	E part, W shore of Lake Ilistoe (former Likolampi) N of Pukhtolova hill, 60°14'04"N, 29°40'43"E, mixed ash-aspen-willow community with pine and apple trees on the shore of the lake. DH, EK, IS.	22.05.2010
4	W part, S of Roshchino (former Raivola), 60°14'03"N, 29°37'19"E, spruce-pine moss-blueberry forest with single rowans and shrubs of hazel. DH, EK.	23.05.2010
5	W part, S of Roshchino, 60°13'56"N, 29°36'55"E, blueberry-moss pine forest with young spruces and juniper. DH, EK.	23.05.2010
6	W part, S of Roshchino, 60°13'59"N, 29°38'06"E, moss-blueberry birch-spruce forest, in places with <i>Sphagnum</i> spp. DH, EK.	23.05.2010
7	W part, S of Roshchino, NE of the old sand pit near the Roshchinskoe highway, 60°13'48"N, 29°37'35"E, an old foundation of granite blocks and a dugout surrounded by a blueberry pine forest. DH, EK.	23.05.2010
8	Central part, valley of the small stream, 60°13'57"N, 29°38'42.5"E, blueberry-moss spruce forest. DH, IS.	29.05.2010
9	Central part, S of the power line, 60°14'17"N, 29°38'50"E, open blueberry-lichen-moss pine forest. DH, IS.	29.05.2010
10	Central part, S of the Lake Belets (former Valklampi), 60°14'29"N, 29°38'51"E, anthropogenic habitat (dump). DH, IS.	29.05.2010
11	Central part, swamp SWW of the Lake Krugloe (former Kaskijärvi), 60°14'20"N, 29°39'35"E, cottongrass-sphagnum swamp with standing pine deadwood. DH, IS.	29.05.2010
12	E part, SW of artillery nests, 60°13'58"N, 29°40'14"E, sparse disturbed aspen-birch forest with juniper. DH, EK, IS.	30.05.2010
13	Central part, SW of the Lake Krugloe, 60°14'11"N, 29°39'53"E, blueberry-moss pine forest. DH, EK, IS.	30.05.2010
14	Central part, the top of a small hill, 60°13'45.5"N, 29°39'29.0"E, pine-aspen-birch forest. DH, EK, IS.	30.05.2010
15	W part, S vicinity of Roshchino, 60°14'01.6"N, 29°36'50.7"E, local lowland, damp horsetail-fern birch-aspen forest with grey alder and maple, with fallen trees. DH, IS.	31.10.2020
16	Central part, lowland N of the Roshchinskoe highway, 60°13'48.7"N, 29°38'43.7"E, relatively undisturbed middle-aged swampy sphagnum spruce forest with birch. DH, IS.	31.10.2020
Additional plots:		
a1	Central part, near the Roshchinskoe highway, 60°13'45"N, 29°38'24.5"E, old concrete blocks near a dirt road surrounded by a disturbed pine forest. DH, IS.	29.05.2010
a2	Central part, valley of a small stream, 60°14'10"N, 29°38'39"E, a trampled path in pine forest with spruce. DH, IS.	29.05.2010
a3	Central part, 60°13'56"N, 29°39'02"E, cutline in pine forest with spruce. DH, IS.	29.05.2010
a4	Central part, SW of the Lake Krugloe, power line, 60°14'09.5"N, 29°39'24.0"E, a group of boulders on a glade in pine forest and a dirt road. DH, EK, IS.	30.05.2010
a5	E part, SW of the Lake Ilistoe, 60°13'56"N, 29°40'39"E, dirt road. DH, EK, IS.	22.05.2010
a6	E part, Pukhtolova hill, S slope close to the top, 60°13'47.1"N, 29°40'53.6"E, disturbed blueberry-moss pine forest. DH, IS.	31.10.2020
a7	Central part, N of the Roshchinskoe highway, 60°13'48.8"N, 29°38'30.6"E, middle-aged lingonberry-moss pine forest. DH, IS.	31.10.2020
a8	E part, Pukhtolova hill, the lower part of the NE slope, 60°13'51.2"N, 29°40'47.5"E, a group of young spruces in a blueberry-moss pine forest near the pond. DH, IS.	31.10.2020
